

# Horizon Health Summary (HHS) Project

## The Challenge

- To **meet the regulatory requirement of a patient assessment within 24 hours of admission**. Prior to this solution, the Initial Nursing History Assessment was charted on paper and was not easily monitored to show completion within the required time period. The goal was 100% compliance in completing the assessment within 24 hours of the patient's admission.

## The Solution

- Based on the requirement need a **Clinical Query Report** was designed and built that provides unit managers with the list of assessments that have not been completed in a timely manner. Assessments that remain incomplete at 16 hours post admission appear on the "Incomplete Assessment Report." This allows for immediate follow-up to complete the assessment during the current shift.

## Regulatory

## The Results

- High compliance with the regulatory requirement of completing the Initial Nursing History Assessment within 24 hours of the patients admission. This is supported by a "24-Hour Report" which posts to Horizon Patient Folder (HPF) at 24 hours post admission, to provide verification in meeting this requirement.
- The "Incomplete Assessment Report" provides unit managers with an 'at-a-glance' way to monitor assessments requiring completion.
